Richardson, TX 75080  
(972) 669-0763

325 Chestnut Street  
Suite 800  
Philadelphia, PA  
(585) 621-9303

## Cybersecurity Offerings

With the rise of online services and technology across industries, cybersecurity has more relevance than ever before. Without the proper security measures in place, your business may be at risk for data loss and breaches that could compromise information privacy. We understand that cybersecurity components play a critical role in system and software safety. That's why we provide extensive and scalable options you can rely on to protect essential network and computer processes.

### Cybersecurity Partnerships:

### Cybersecurity Services We Offer:

#### Penetration Testing

Approaches a network from the outside in to gather intelligence and provide detailed reports that identifies threats. This includes testing firewalls, scanning open ports, and performing Secure Shell Testing (SSH) to find all network vulnerabilities. A plan is then created to remediate each threat.

#### Managed Detection and Response (MDR)

Looks at a network from the inside out to better integrate technology for improved detection and response to cybersecurity threats.

#### NIST Remediation

Advances your ability to detect, investigate & respond to threats to mitigate vulnerabilities and move towards more secure operations using NIST 800-171 and CMMC requirements for computer systems.

#### Cybersecurity Maturity Model Certification (CMMC)

The DoD released CMMC to strengthen an earlier standard known as the Defense Federal Acquisition Regulation Supplement (DFARS) and to address the growing information security concerns across their supporting contractor ecosystem. We provide the resources needed to perform the remediation steps required to become compliant and the legal documentation to prove compliance has been reached and is being maintained when the time comes for a CMMC Audit.

## Vulnerability Scanning

Finds weaknesses in web applications, passwords, configurations, as well as injected malware code, missing data encryption, excessive privileges and zero day threats. A plan is created to remediate each threat.

## KnowBe4 Security Awareness Training

Create a fully mature security awareness training program with KnowBe4, the world's largest integrated Security Awareness Training and Simulated Phishing platform. Find out where your users are in both security knowledge and security culture. With an integrated deep learning neural network, you get detailed reports that help evaluate how your organization's risk changes over time and truly measure the performance of your training program and understand where improvements need to be made to strengthen your human firewall.

## MailRoute Hosted Email Security and Threat Management

Stop spam, viruses, ransomware and other threats. You can add Continuity + Archiving Lite for business productivity. This product easily integrates with Office 365, other hosts and all servers.

## Antivirus / Endpoint Protection

Next-Generation SentinelOne Endpoint Protection protects against all threat vectors.

- Pre-Execution: SentinelOne's single agent technology uses a Static AI engine to provide pre-execution protection. The Static AI engine replaces traditional signatures and obviates recurring scans that kill end-user productivity.
- On-Execution: SentinelOne's Behavioral AI engines track all processes and their interrelationships regardless of how long they are active. When malicious activities are detected, the agent responds automatically at machine speed. Our Behavioral AI is vector-agnostic – file-based malware, scripts, weaponized documents, lateral movement, file-less malware, and even zero-days.
- Post-Execution: SentinelOne's Automated EDR provides rich forensic data and can mitigate threats automatically, perform network isolation, and auto-immunize the endpoints against newly discovered threats. As a final safety measure, SentinelOne can even rollback an endpoint to its pre-infected state.

## ABOUT COMTEC SOLUTIONS

ComTec Solutions is a full-service technology services and ERP implementation and consulting company that has been providing advisory and technical expertise for manufacturers and engineering firms for nearly 30 years. Companies looking to improve productivity, elevate the customer experience, and accelerate financial growth find value in ComTec's expertise. ComTec is a proud Certified Platinum Epicor partner dedicated to helping customers strategically align technology with their desired business outcomes with speed, agility, and confidence.
